PRODUCT AT

S-band

2.7 – 2.9 GHz

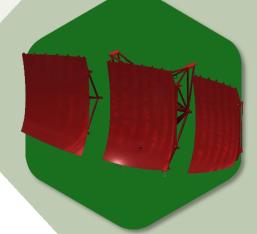

MAIN FEATURES

- Transportable air trafic control antenna
- **Fully Compliant with ICAO and EUROCONTROL** Requirements
- **High Gain**
- **High and Low Radiating Beam**
- **Low Sidelobes**
- **Linear/ Circular Polarization Switching**
- **Weather Channels**
- Color design according the customer requirement

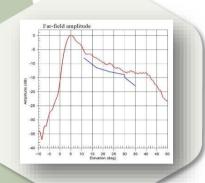

The S-band PSR Antenna Morava

is a time-proven, high quality design. The antenna has been installed and operated in many airports throughout the world. The primary antenna consists of a reflector and RF boom. The reflector bears a reflective surface made of aluminium mesh, whose tubular support structure also serves as the secondary antenna carrier and to which the RF boom is attached. The tubular structure of the antenna is welded from circular structural steel tubes . Two sheet metal flanges are welded at the top of the tubular structure to which the secondary antenna frame is welded.

PSR ANTENNA CAN BE CO-MOUNTED WITH RAMET LVA ANTENNA, OR LVA ANTENNAS OF OTHER **PRODUCERS**
